UC Santa Cruz building seismic ratings Theater Arts Foundry Building

CAAN #7405

410 Foundry Road, Santa Cruz, CA 95064

UCSC Campus: Main Campus DATE: 2019-06-30

Rating summary	Entry	Notes
UC Seismic Performance Level (rating)	V (Poor)	
Rating basis	Tier 1	ASCE 41-17 ¹
Date of rating	2019	
Recommended UC Santa Cruz priority category for retrofit	Priority B	Priority A=Retrofit ASAP Priority B=Retrofit at next permit application
Ballpark total construction cost to retrofit to IV rating ²	Medium (\$50- \$200/sf)	See recommendations on further evaluation and retrofit.
Is 2018-2019 rating required by UCOP?	Yes	Building was not previously rated
Further evaluation recommended?	No	

¹ We translate this Tier 1 evaluation to a Seismic Performance Level rating using professional judgment. Non-compliant items in the Tier 1 evaluation do not automatically put a building into a particular rating category, but we evaluate such items along with the combination of building features and potential deficiencies, focused on the potential for collapse or serious damage to the gravity supporting structure that may threaten occupant safety. See Section III B of the UC Seismic Policy and Method B of Section 321 of the 2016 California Existing Building Code.

² Per Section 3.A.4.i of the Seismic Program Guidebook, the cost includes all construction cost necessitated by the seismic retrofit, including restoration of finishes and any triggered work on utilities or accessibility. It does not include soft costs such as design fees or campus costs. The cost is in 2019 dollars.

Building information used in this evaluation

Site visit on 2019-06-13

Additional building information known to exist

None

Scope for completing this form

No structural drawings were available for this building. We carried out a site visit to investigate the lateral-resisting-system. An ASCE 41-17 Tier 1 evaluation was completed. We did not perform an ASCE 41 Tier 1 nonstructural evaluation, but we looked for potentially hazardous nonstructural components during our site visit.

Brief description of structure

The Theater Arts Foundry building is a single-story structure that contains approximately 2000 square feet. The structure is a Butler Building with steel moment frames in the transverse direction and metal panels in the longitudinal direction.

Identification of levels: Level 1 (at grade), Roof

<u>Foundation system:</u> The site is flat. No foundation is visible, and no drawings were available at time of this review. Level 1 is slab on grade.

<u>Structural system for vertical (gravity) load:</u> The roof is framed with steel joists spanning to steel moment frames. A crane is hung from the steel moment frames.

Structural system for lateral forces: The structure is a Butler Building with steel moment frames in the transverse direction and metal panels in the longitudinal direction. The moment frame column is a W8 shape, the moment frame beam appears to be a W10 or W12. The metal wall panels are attached to an edge beam at the roof, to horizontal girts at third points along the height of the wall, and to an angle at the bottom of the wall that is attached to the slab on grade. Fasteners are visible at joints in the metal panel at approximately 12" o.c. Our visual inspection found that the moment frames appeared in good condition but the metal wall panels were rusted and water-damaged.

Brief description of seismic deficiencies and expected seismic performance including mechanism of nonlinear response and structural behavior modes

Identified seismic deficiencies of the building include the following:

• The metal paneling on the exterior walls of the building is rusted and deteriorated at several locations, thus compromising the lateral load path to the foundation.

Structural deficiency	Affects rating?	Structural deficiency	Affects rating?
Lateral system stress check (wall shear, column shear or flexure, or brace axial as applicable)	N	Openings at shear walls (concrete or masonry)	N
Load path	Υ	Liquefaction	N
Adjacent buildings	N	Slope failure	N
Weak story	N	Surface fault rupture	N
Soft story	N	Masonry or concrete wall anchorage at flexible diaphragm	N
Geometry (vertical irregularities)	N	URM wall height-to-thickness ratio	N
Torsion	N	URM parapets or cornices	N
Mass – vertical irregularity	N	URM chimney	N
Cripple walls	N	Heavy partitions braced by ceilings	N
Wood sills (bolting)	N	Appendages	N
Diaphragm continuity	N		

maffei-structure.com

Summary of review of non-structural life-safety concerns, including at exit routes.3

We walked through the building. We did not perform the Tier 1 nonstructural evaluation, but we looked for potentially hazardous nonstructural components during our site visit on 13 June 2019. There is a crane suspended from the roof beams, and the anchorage of the crane to the beams is unknown and should be inspected. Besides the crane, as shown below, we found no major nonstructural concerns.

UCOP non-structural checklist item	Life safety hazard?	UCOP non-structural checklist item	Life safety hazard?
Heavy ceilings, feature or ornamentation above large lecture halls, auditoriums, lobbies or other areas where large numbers of people congregate	None observed	Unrestrained hazardous materials storage	None observed
Heavy masonry or stone veneer above exit ways and public access areas	None observed	Masonry chimneys	None observed
Unbraced masonry parapets, cornices or other ornamentation above exit ways and public access areas	None observed	Unrestrained natural gas-fueled equipment such as water heaters, boilers, emergency generators, etc.	None observed

Discussion of rating

The rating of V (Poor) is due to the poor condition of the building, namely the rusted wall panel connections to the foundation. If further inspection of the walls finds the connection to the foundation to be mostly intact, or if the metal panels are replaced, the rating may be raised to IV (Fair).

Recommendations for further evaluation or retrofit

We recommend that the Campus perform a more detailed inspection of the metal wall panels, and replace as needed to provide a connection to the foundation.

Peer review of rating

This seismic evaluation was discussed in a peer review meeting on 24 June 2019. Reviewers present were Bret Lizundia of R+C and Jay Yin of Degenkolb. Comments from the reviewers have been incorporated into this report. The reviewers agreed with the assigned rating.

Additional building data	Entry	Notes
Latitude	36.99583	
Longitude	-122.062046	
Are there other structures besides this one under the same CAAN#	No	
Number of stories above lowest perimeter grade	1	
Number of stories (basements) below lowest perimeter grade	0	
Building occupiable area (OGSF)	1984 sq. ft.	
Risk Category per 2016 CBC Table 1604.5	II	Educational occupancy (classroom)
Building structural height, h_n	15' +/-	Structural height defined per ASCE 7-16 Section 11.2
Coefficient for period, C_t	0.020	Estimated using ASCE 41-17 equation 4-4 and 7-18
Coefficient for period, eta	0.75	Estimated using ASCE 41-17 equation 4-4 and 7-18
Estimated fundamental period	0.11 sec	Estimated using ASCE 41-17 equation 4-4 and 7-18

³ For these Tier 1 evaluations, we do not visit all spaces of the building; we rely on campus staff to report to us their understanding of the type and location of potential non-structural hazards.

https://gis.santacruzcounty.us/mapgallery/Emergency%20Management/Hazard%20Mitigation/LiquifactionMap2009.pdf https://gis.santacruzcounty.us/mapgallery/Emergency%20Management/Hazard%20Mitigation/LandslideMap2009.pdf https://gis.santacruzcounty.us/mapgallery/Emergency%20Management/Hazard%20Mitigation/FaultZoneMap2009.pdf

⁴ Determination of site class and assessment of geotechnical hazards are based on correspondence with Pacific Crest Geotechnical Engineers and Nolan, Zinn, and Associates Geologists. [Revised Geology and Geologic Hazards, Santa Cruz Campus, University of California, Job # 04003-SC 13 May 2005]. Site class is taken as D throughout the main campus of UC Santa Cruz. The following links provide hazard maps for liquefaction, landslide, and fault rupture:

 $^{^{5}}$ F_{V} factor used does not include the requirements of Section 11.4.8-3 of ASCE 7-16, which per Exception 2 would result in an effective F_{V} factor of 2.72 (1.5 times larger). We are doing this intentionally as we understand that the appropriateness of the requirements of Section 11.4.8 is under review by UCOP.

ASCE 41-17 Collapse Prevention Basic Configuration Checklist

LOW	SEIS	SMI	CITY
BUILD	ING	SYS	STEMS - GENERAL
			Description
	N/A C IC	O	LOAD PATH: The structure contains a complete, well-defined load path, including structural elements and connections, that serves to transfer the inertial forces associated with the mass of all elements of the building to the foundation. (Commentary: Sec. A.2.1.1. Tier 2: Sec. 5.4.1.1) Comments: Collectors to walls are not provided. Caisson reinforcement is developed only 20db into
C NC	0	U	pier caps versus current ACI 318-14 development length of 28db. ADJACENT BUILDINGS: The clear distance between the building being evaluated and any adjacent building is greater than 0.25% of the height of the shorter building in low seismicity, 0.5% in moderate seismicity, and 1.5% in high seismicity. (Commentary: Sec. A.2.1.2. Tier 2: Sec. 5.4.1.2)
	C		Comments: C - No adjacent buildings
C NC	N/A	U	MEZZANINES: Interior mezzanine levels are braced independently from the main structure or are anchored to the seismic-force-resisting elements of the main structure. (Commentary: Sec. A.2.1.3. Tier 2: Sec. 5.4.1.3)
	<u> </u>		Comments: C - No mezzanines
BUILD	ING	SYS	STEMS - BUILDING CONFIGURATION
			Description
C NC	N/A	U	WEAK STORY: The sum of the shear strengths of the seismic-force-resisting system in any story in each direction is not less than 80% of the strength in the adjacent story above. (Commentary: Sec. A2.2.2. Tier 2: Sec. 5.4.2.1)
	С		Comments: C – wall length/thickness increases with height.
C NC	N/A C	O	SOFT STORY: The stiffness of the seismic-force-resisting system in any story is not less than 70% of the seismic-force-resisting system stiffness in an adjacent story above or less than 80% of the average seismic-force-resisting system stiffness of the three stories above. (Commentary: Sec. A.2.2.3. Tier 2: Sec. 5.4.2.2) Comments: C

Note: C = Compliant NC = Noncompliant N/A = Not Applicable U = Unknown

C

ASCE 41-17 Collapse Prevention Basic Configuration Checklist

C NC N/A U	VERTICAL IRREGULARITIES: All vertical elements in the seismic-force-resisting system are continuous to the foundation. (Commentary: Sec. A.2.2.4. Tier 2: Sec. 5.4.2.3)
С	Comments: C – interior walls are continuous to foundation.
C NC N/A U C C C C NC	GEOMETRY: There are no changes in the net horizontal dimension of the seismic-force-resisting system of more than 30% in a story relative to adjacent stories, excluding one-story penthouses and mezzanines. (Commentary: Sec. A.2.2.5. Tier 2: Sec. 5.4.2.4) Comments: NC – Level 1 has more than 30% increase in wall length versus Level 2. This is due to the wall added at the north end of the building for retaining soil.
C NC N/A U C C C C	MASS: There is no change in effective mass of more than 50% from one story to the next. Light roofs, penthouses, and mezzanines need not be considered. (Commentary: Sec. A.2.2.6. Tier 2: Sec. 5.4.2.5) Comments: C – There is a 44% change in mass between Level 3 (larger floor footprint) and Level 4 (smaller floor footprint).
C NC N/A U C C C C NC	TORSION: The estimated distance between the story center of mass and the story center of rigidity is less than 20% of the building width in either plan dimension. (Commentary: Sec. A.2.2.7. Tier 2: Sec. 5.4.2.6) Comments: NC – Level 1 has significantly more wall at the north end of the building, resulting in the eccentricity between center of mass and center of rigidity in the north-south direction.

MODERATE SEISMICITY (COMPLETE THE FOLLOWING ITEMS IN ADDITION TO THE ITEMS FOR LOW SEISMICITY) **GEOLOGIC SITE HAZARD** Description C NC N/A U LIQUEFACTION: Liquefaction-susceptible, saturated, loose granular soils that could jeopardize the building's seismic performance do not exist in the foundation soils at depths within 50 ft (15.2m) under the building. (Commentary: Sec. A.6.1.1. 0000 Tier 2: 5.4.3.1) C Comments: C NC N/A U SLOPE FAILURE: The building site is located away from potential earthquake-induced slope failures or rockfalls so that it is unaffected by such failures or is capable of accommodating any predicted movements without failure. (Commentary: 0000 Sec. A.6.1.2. Tier 2: 5.4.3.1)

Note: C = Compliant NC = Noncompliant N/A = Not Applicable U = Unknown

SHEAR STRENGTH OF CONCRETE ELEMENTS

FEMA 306 Section 5.3.6

Input			
f'_{ce}	4000	psi	concrete expected strength
λ	1.00		lightweight aggregate factor = 1.0 NWC, 0.85 sand LWC, 0.75 LWC
μ	1.4	λ	per ACI 318 11.7.4 = 1.4 monolithic, 1.0 roughened, 0.6 not roughened, 0.7 bars
$f_{\mathit{ye_transverse}}$	46	ksi	expected transverse steel yield strength
$f_{\it ye_longitudina}$	70	ksi	expected shear friction steel yield strength
b_w	32.0	in	width
I_{w}	24.0	in	length of wall (depth of beam or column)
h_w	12.3	ft	clear height of wall or column (length of beam or spandrel)
$ ho_n$	0.00115		transverse reinforcement ratio
A_s	8.0	in ²	longitudinal reinforcement area
Р	600	kip	axial load
M_{n_1}	645	k-ft	moment strength at one end of element (e.g. top)
M_{n_2}	645	k-ft	moment strength at other end of element (e.g. bottom)
С	12.5	in	distance from extreme compressive fiber to neutral axis
θ	35	degrees	35 degrees unless limited to larger angles by the potential corner to corner crack
			for corner to corner crack, use $\theta = \max(35, \operatorname{atan}(I_w/h_w)) = 35$

Behavior Mode	Flexure/ Diagonal	
$V_{n_flexure} = (M_{n1} + M_{n2})/h =$	105 kip	
$V_{n_diagonal_tension_at_low_ductility_demand} =$	170 kip	$(\mu \leq 2)$
$V_{n_diagonal_tension_at_high_ductility_demand} =$	91 kip	$(\mu \geq 5)$
V _{n sliding shear} =	614 kip	

Diagonal Tension Shear

	$\mu \leq 2$	$\mu \geq 5$	flexural ductility demand		
$V_{n_diagonal}$	170	91 kip	$= V_c + V_s + V_p$		
V_c	96	17 kip	$= \alpha \beta k_{rc} (f'_{ce})^{1/2} b_{w} (0.8 I_{w})$		
V_s	28	28 kip	$= \rho_n f_{ye} b_w h_d$		
V_p	46	46 kip	$= ((I_w - c) N_u) / (2M/V)$		
k rc	3.5	0.6			
α	1.0	1.0	$= 3 - M/(0.8l_w V) \qquad (1.0 \le \alpha \le 1.5)$		
β	0.708	0.708	$= 0.5 + 20 \rho_g \qquad (\le 1.0)$		
$ ho_{\it g}$	0.01042	0.01042	longitudinal reinforcement ratio		
M/V	74.0	74.0 in	= $h_w/2$ assumes that beams/floors are stiffer than column (fixed-		
			Adjust M/V calculation for other conditions.		
h_d	16.4	16.4 in	$= (I_w - c)\cot \theta \qquad (\leq h_w)$		
N_u	600	600 k	axial load		
2 <i>M</i> / <i>V</i>	147.96	147.96 in	= h_w assumes that beams/floors are stiffer than column (fixed-		
			Adjust M/V calculation for other conditions.		

Sliding Shear

 $V_{n_sliding}$ 614 kip = $A_{vf}f_y \mu$ ($\leq 0.2f_c A_c$, 800 A_c)
